Section 7. Visit Checklists

This section contains examples of checklists detailing the protocol-specified procedures that must be completed at MTN-003 study visits. The checklists also specify the data collection forms that must be completed at each visit.

7.1 Use of Checklists

The visit checklists included in this section are designed to guide site staff in proper study procedures as well as to serve as source documentation of procedures performed at study visits. Note, however, that checklists alone may not be sufficient for documenting all procedures. For example, chart notes may be required to:

- Explain why procedures in addition to those listed on a checklist were performed
- Explain why procedures listed on a checklist were not performed
- Document procedures performed at interim visits
- Document the content of counseling sessions and/or other in-depth discussions with participants (e.g., related to adherence to protocol requirements)

See Section 3 of this manual for detailed information on source documentation requirements. Tips for completing visit checklists in accordance with these requirements are as follows:

- Enter the participant identification number (PTID) and visit date in the top section of each checklist. If information is written on the front and back of the checklist, enter the PTID and visit date on both sides.
- For screening visits, enter the screening attempt number in the top section of the checklist.
- For follow-up visits, enter the visit code in the top section of each checklist.
- Enter your initials only beside the procedures that you perform. Do not enter your initials beside procedures performed by other staff members. If other staff members are not available to initial checklist items themselves, enter, initial, and date a note on the checklist documenting who completed the procedure, e.g., "done by {name}" or "done by lab staff."
- If all procedures listed on a checklist are performed on the date entered in the top section of the form, the date need not be entered beside each item. If procedures listed on a checklist are performed on multiple dates, enter the date upon which each procedure is performed beside each item.
- If a procedure listed on the checklist is not performed, enter "ND" for "not done" or "NA" for "not applicable" beside the item and record the reason why on the checklist (if not self-explanatory); initial and date this entry.

7.2 Sequence of Procedures

The sequence of procedures presented on the visit checklists is a suggested ordering. In consultation with the MTN CORE (FHI), site staff may modify the checklists included in this section to maximize the efficiency of site-specific study operations. Sites may alter the sequence of procedures to suit local staffing and logistical requirements, with the following exceptions:

- Informed consent for screening must be obtained before any screening procedures are performed. Screening procedures are listed in protocol Sections 7.2 and 7.3.
- Informed consent for enrollment must be obtained before any study enrollment or follow-up procedures are performed. Enrollment procedures are listed in protocol Section 7.4. Follow-up procedures are listed in protocol Section 7.5.
- On the day of enrollment, random assignment must take place after administration of the Baseline Behavior Assessment form, Baseline Audio Computer Assisted Self-Interview (ACASI) Questionnaire, collection of blood for plasma archive, and administration of Hepatitis B vaccine, if applicable.
- Pelvic exam procedures must be performed in the sequence shown on the pelvic exam checklists.
- At follow-up visits, behavioral assessment forms and ACASI questionnaires must be administered prior to the delivery of HIV and adherence counseling.

Initials	Procedures		
	 Confirm participant identity and PTID per site SOPs. Check for co-enrollment in other (non-approved) studies per site SOPs: NOT enrolled in another study. Enrolled in another study ⇒ product hold may be required. Refer to SSP Section 10. Obtain as much information as possible about the co-enrollment — from the participant and from the other study team — for use when consulting the PSRT. Schedule participant to return when a response from PSRT is expected. Instruct participant to return unused study product to pharmacy. Review previous visit documentation. 		
	5. Review elements o	f informed consent as needed.	
	6. Explain procedures	to be performed at today's visit.	
	7. Review/update loca	ntor information.	
	 8. Administer the Menstrual Practices and Study Disclosure Assessment form 9. Administer the appropriate (Oral or Vaginal) Product Adherence and Behavior Assessment form. 10. Determine date and time of last study product use and record on Specimen Storage/PK form. Collect and file participant source document if available. 11. Administer the appropriate follow-up ACASI Questionnaire. 12. Collect urine (15-60 mL), aliquot ~5 mL, and perform pregnancy test: NOT pregnant. Pregnant, pregnancy first identified at a previous visit: Continue to HOLD study product. 		
		fer to MTN-016; document in cha	art notes.
